PROFESSIONAL SUMMARY

Software Engineering graduate with a strong foundation in programming, software development, databases, and problem-solving. Experienced in developing applications, working with APIs, and managing databases. Eager to apply technical knowledge, learn new technologies, and contribute to developing reliable and efficient software solutions in a professional environment.

EXPERIENCE

Internship — Zong CMPak Ltd August 2025 – September 2025

- Worked with Python and MySQL for database management, querying, and handling datasets.
- Preprocessed and analyzed data to support Machine Learning model training and predictive insights.
- Built and tested RESTful APIs using Flask for integrating machine learning models with applications.
- Gained hands-on experience in database design, data preprocessing, and applying machine learning concepts to real-world problems.
- Developed the Zong Employee Chatbot.

TECHNICAL SKILLS

Programming Languages: Python, C++, Flask (Backend Development)
AI / Machine Learning: Machine Learning, Data Preprocessing, Scikit-learn, Pandas, NumPy, TensorFlow, PyTorch, Hugging Face, , REST APIs
Android Development: Android Studio, Java, XML Layouts, Android UI Development, Fragments, and RecyclerView
Software Testing: Manual Testing, Test Case Design, Functional Testing, Test Execution,Bug Reporting, Defect Tracking, SDLC, STLC, Software Quality Assurance
Tools & Technologies: Git, GitHub, Jupyter Notebook, VS Code, Android Studio, PyCharm

EDUCATION

BS Software Engineering — Capital University of Science & Technology (CUST) Sep 2022 – July 2026

PROJECTS

AI Visibility Monitoring and Optimization System *Python,Flask, React, MySQL*

- Developed a full-stack platform to monitor and optimize brand visibility in AI-generated responses using NLP-based scoring and AI model integration.Integrated the Groq API into the scoring pipeline and built an admin reporting module generating PDF and Excel reports. Collaborated with a team to integrate SEO tools and content generation features into a unified codebase.

Fake Product Reviews Detection in Artificial Intelligence *Python, NLP, Machine Learning, Scikit-learn*

- Developed an AI-based system for e-commerce platforms to detect fake product reviews using Natural Language Processing (NLP) and Machine Learning techniques.
- Preprocessed review text, trained classification models, and evaluated model performance.

Rainfall Prediction System *Python, Machine Learning*

- Developed a machine learning system to predict the probability of rainfall based on temperature, humidity, wind speed, and atmospheric pressure.

Mental Health Companion App | Android Application

- Developed a utility-based Android application for daily mental wellness and self-care using Java, XML, and Android Studio.Implemented mood tracking, journal entries, gratitude logs, goal setting, daily checklists, and sleep tracking.
- Developed wellness features that include breathing exercises, positive affirmations, daily quotes, mindful reminders, and an image gallery.

Order Tracking System

- Developed a Python-based application that allows users to manage, monitor, and track the status of their orders according to the dataset.

Railway Management System *C++, OOP, Data Structures*

- Developed a Railway Management System in C++ to manage train schedules, ticket bookings, and passenger records. Implemented data handling, searching, and updating records using object-oriented programming concepts.

Zong Employee Chatbot *Python, MySQL*

- Developed a desktop chatbot application using Python that connects to the Zong chatbot backend.
- Provided a simple chat interface allowing employees to interact with the system and switch between different responses.
